

Summary

AI engineer specialized in building and deploying LLM-powered systems, including conversational AI, retrieval pipelines, and evaluation frameworks. Experience delivering production AI platforms and data-intensive enterprise tooling.

Skills

Languages: Python, TypeScript, JavaScript, SQL, C/C++, Java, Go, C# | **Frameworks:** React, Node.js, Next.js, Express, Flask, Redux, .NET, FastMCP | **AI/Systems:** RAG, Vector DBs, MCP, CUDA, AI Evaluation & Observability, LangChain, MLOps | **Platforms:** Git, Docker, Kubernetes, Linux, AWS, Azure, GitOps, IssueOps, CI/CD, Jira | **Databases:** MySQL, PostgreSQL, MongoDB, MariaDB, SQLite, SQL Server, Chroma DB | **Competencies:** Systems thinking, auth flows, Agentic SDLC, agile development, LLM systems design

Professional Experience

HP Inc. Machine Learning Engineer

December 2025 - Present

- Built and deployed LLM-powered applications using RAG pipelines, vector databases, and agentic workflows to automate incident resolution and knowledge retrieval
- Developed a conversational fab escalation assistant integrating historical incident data, reducing mean time to resolution and standardizing troubleshooting workflows
- Designed an enterprise knowledge system capturing and serving domain expertise via retrieval pipelines for long-term reuse
- Delivered AI systems to streamline data-intensive operational workflows (capital equipment acquisition), reducing manual input and improving decision throughput
- Deployed and maintained production AI services with focus on monitoring, observability, reliability, and operational readiness
- Evaluated and validated off-the-shelf AI models using structured testing and performance analysis
- Led adoption of spec-driven, AI-assisted development workflows, improving iteration speed and alignment with business requirements
- Collaborated across software, hardware, and international teams to integrate AI systems into production environments

HP Inc. Software Applications Engineer - AI Platforms & Developer Experience

February 2025 - December 2025

- Earned HP Innovator Award for RAG graph architectures supporting low-latency augmentation of AI coding tools.
- Prevented significant costs (\$1M+) evaluating productivity impacts of fine-tuned coding models, informing licensing strategy.
- Delivered MCP-based developer platforms enabling secure enterprise-context delivery for agentic coding workflows.
- Supported enterprise AI platforms serving 10,000+ engineers, tens of thousands of active repositories, and 8,000+ Copilot users.
- Designed scalable retrieval pipelines using vector DBs, authenticated API layers, and enterprise authorization models.
- Integrated enterprise data sources into LLM-powered developer tools, improving context-aware code generation
- Provided office hours guidance supporting AI workflows and prompt-engineering best practices.
- Presented AI-driven developer-experience strategies at internal conferences and leadership events.

HP Inc. Software AI Intern

June 2024 - January 2025

- Led evaluations of AI coding tools via automated assessment pipelines, enterprise datasets, and hallucination/security analyses
- Supported enterprise developer platforms, including Stack Overflow, developer portals, and knowledge systems.
- Produced instructional content showcasing effective GitHub Copilot usage including prompt-engineering strategies
- Developed and refined prompting strategies and evaluation pipelines for LLM systems, improving response quality, consistency, and task reliability

Projects

Nexus - React, Node.js, TypeScript, Tailwind

October 2023

CalHacks 10.0 Grand Prize Winner

Social networking and voice-chat platform using AI to match users based on shared life experiences and interests.

Education

Bachelor of Science, Computer Science | GPA: 3.2

Oregon State University, College of Engineering - Graduated 2024 (ABET-accredited program)
